In context, dark + light theme

These examples show tabs in various contexts. Some of these contexts are experimental and not yet finalized, such as tabs in tables and list views.

Tab scrolling behavior

Tabs scroll similar to how our horizontal navigation does. It does not truncate into an overflow button. This decision was mainly made based on keeping the behaviors consistent across the two components.

On mobile, the user can swipe to scroll in addition to tapping the arrow button for scrolling the tabs.

Mobile: Keep the arrow

Tab item 1 | Tab item 2 | Tab item 3 | Tab item

Overlap is the indication

Tab item one | Tab item two | Tab item three

No overlap is possible

Tab item 1 | Tab item 2 | Tab item 3 | Tab

Arrow is foolproof

Spacing spec - fixed + flex

We use two systems for spacing tabs, fixed and flex.

Fixed is used in most cases, mainly those where there are many tabs and ample room for them. Fixed spacing uses consistent spacing values (8px) to the left and right of the text.

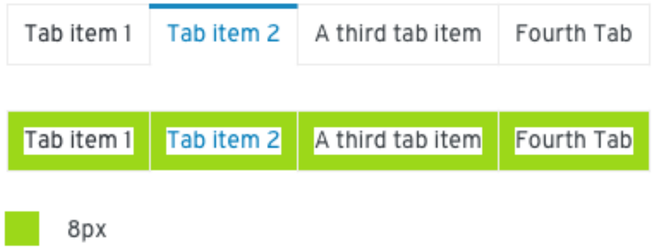
In cases where there are a few tabs existing within a single column, card, or other confined space, use flex spacing so that the width of the tabs expands to fill the entire space.

Tab spacing in relation to context

Tab spacing system uses two formats, fixed spacing and flex spacing.

Consistent, fixed spacing

8px spacing all around text
Page tabs, table tabs, etc. Needs to be defined.



Full width, flex spacing

8px spacing above/below, but left/right flex to fill width
Cards, panels, etc. Needs to be defined.
